

We can find the next number of the sequence of triangular numbers by adding another row of dots and counting all the dots placed previously.

The first triangle has just 1 dot.

The second triangle has another row with 2 extra dots, making 1+2=3

The third triangle has another row with 3 extra dots, making 1+2+3=6

so, the fourth has 1+2+3+4=10. And the series goes on,

Here 1, 3, 6, 10, 15, ... are called triangular numbers.

Note

Picture form of triangular numbers can make an equilateral triangle or a right angled triangle.

Do you know?

What is the relationship between triangular numbers and natural numbers?

$1 = 1$

$1 + 2 = 3$

$1 + 2 + 3 = 6$

$1 + 2 + 3 + 4 = 10$

$1 + 2 + 3 + 4 + 5 = 15$ → Triangular numbers

The sum of series of consecutive natural numbers make the triangular numbers
