

2 Electrical Appliances

Electrical energy is used in many domestic appliances such as electric stove, iron box and fan. As current flows into the coil of the electric devices, it heats up the coil. With the help of this heat energy, we do many useful works. Thus, electrical energy is converted into heat energy. Electrical energy is converted to mechanical energy in fan, light energy in bulb and, sound and light energy in computer.

WLEPA

Heat Energy | Light and Sound Energy | Light Energy | Mechanical Energy

3 Driving Car

We use fuel in the form of petrol or diesel or gas to run vehicles. When this fuel burns in the engine, chemical energy is converted into heat energy. Burning fuel produces hot gases which pushes the piston in the engine to move the vehicle. Thus, heat energy is converted into mechanical energy.

Do you know?

Photosynthesis changes solar energy into chemical energy.
