d. Kilometre

When you need to get from one place to another, you can measure that distance using kilometres. A kilometre is equal to 1,000 metres.

The distance from one city to another or how far a plane travels is measured using kilometres.

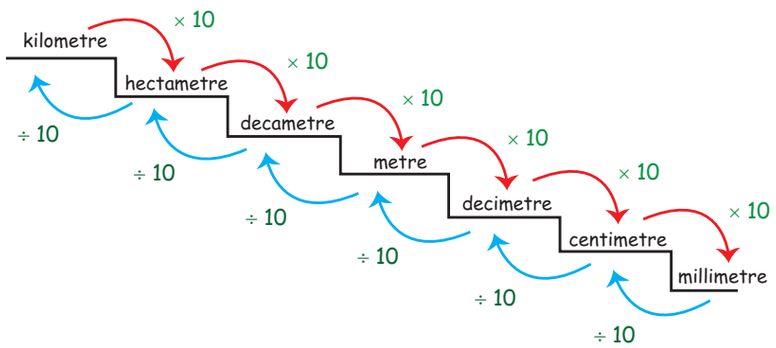

We can ride two wheeler/ Four Wheeler to go from one place to the other. The distance travelled is measured using odometre.

1 Kilometre = 1000 metres

S.No.	Distance to be calculated	Distance in Km
1.	School – your home	
2.	School – your taluk head quarters	
3.	School – your District head quarters	

Note:
Collection of above data can be done with the help of your elders.

4.2 Conversion of units

Let us know

To convert upper unit into lower unit the number should be multiplied.

To convert lower unit into upper unit the number should be divided.

100 centimetre = 1 metre

$\frac{1}{2}$ metre = 50 centimetre

$\frac{1}{4}$ metre = 25 centimetre

$\frac{3}{4}$ metre = 75centimetre

1000 metre = 1 kilometre
