1 Kidneys

The kidneys filter the blood to remove waste and produce urine. The kidneys are a pair of dark red, bean shaped organs placed behind the abdomen on either side of the vertebral column. The average adult's kidney measures about 12 cm in length, 6 cm in width and 3 cm in thickness. Right kidney is slightly lower than the left kidney. Each kidney is covered by a fibrous membrane called capsule.

The kidneys are made up of millions of excretory units, called nephrons, which are the structural and functional units of the kidneys.

2 Ureters

Two ureters connect the kidneys with the urinary bladder. Urine formed from each kidney reaches urinary bladder through ureters.

3 Urinary Bladder

It is sac-like in shape and acts as a temporary storage organ of urine. Urine entering the urinary bladder from the ureters slowly fill the hollow space inside the bladder. Urine is expelled from the body through the urethra.

Do you know?

Every minute, kidneys receive approximately 1.25 litre of blood.

V. Nervous System

Nervous system is an integration of nerves and they are composed of specialised cells called neurons. The human nervous system is divided into the following.

1. Central Nervous System (CNS)
2. Peripheral Nervous System (PNS)
