Household things used in the modern days

VI. Sinking and Floating

You could have seen that some objects float in water while others sink. Whether an object floats or sinks in water is determined by its density. When an object is immersed into a liquid, the liquid exerts an upward force on the object. It is known as upthrust. What happens if you put a coin and an empty water bottle in water? The weight of the coin is greater than the upthrust and so the coin sinks. But the weight of the empty water bottle is less than the upthrust and so it floats.

Activity 3

Take water in a bucket and drop the following items into the water.

Apple, Scissors, Silver fork, Marbles, Plastic ball.

Complete the table from your observation.

Things	Floats / Sinks
Apple	
Scissors	
Silver fork	
Marbles	
Plastic ball	

Floating

Sinking

Do you know?

A fish can control the upthurst on its body. So, it can float and go beneath the surface of the water.
