

VII. Solubility of Solids in Water

Some substances completely dissolve in water. We say that these substances are soluble in water. Other substances do not dissolve in water even after we stir for long time. These substances are insoluble in water.

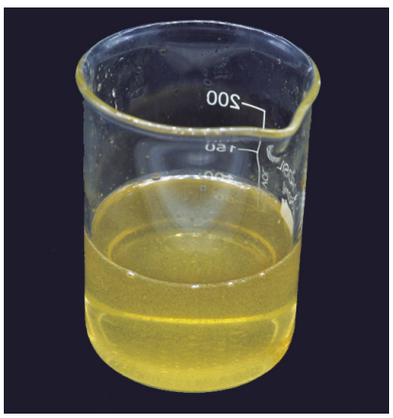

Activity 4

Collect some samples of solid substances such as salt, sugar, chalk powder, sand and saw dust.

Take five beakers filled with water and add a small amount of sugar to the first beaker, salt to the second and similarly, add small amounts of other substances in other beakers. Stir the content with a rod. Wait for a few minutes. What happens to the substances added? Note your observation.

Substances	Disappears in water / Does not disappear
Salt	
Sugar	
Chalk powder	
Sand	
Saw dust	

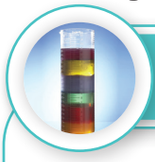

Sugar in water

Chalk in water

Sand in water

VIII. Mixing

Certain liquids are denser than other liquids. When you attempt to mix liquids which have different densities they separate when you stop mixing them. The heavier liquid deposits at the bottom and the lighter liquid floats on the top.
