

Activity 1

Find out what do we need for the following.

To drive bus | To dry cloth | To cook | To work in laptop

1 Mechanical Energy

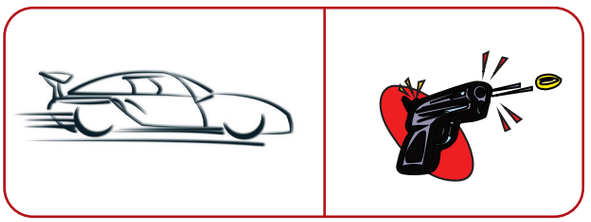

Energy possessed by an object due to its motion and position is called mechanical energy. Mechanical energy can be classified into two.

- Kinetic Energy
- Potential Energy

Kinetic Energy

Energy possessed by a moving object is known as kinetic energy. It is also known as energy of motion.

Examples: Moving car, cricket ball bowled by a player, bullet coming out of a gun.

Potential Energy

Energy possessed by an object which is at rest is known as potential energy. It is also known as stored energy of position.

Examples: Object lifted above, stone in the stretched rubber, water in the dam.

Uses of Mechanical Energy

Mechanical energy can be used to do many works. Some of them are given below.

- In hydro electric plants, kinetic energy of water is converted into electrical energy.
- Wind mills convert kinetic energy of winds into electrical energy.
- Mechanical energy of the hammer is used to apply force on the nail.
- Mechanical energy can bring a moving body to rest and make a body at rest to move.
