Uses of Light Energy

- We are able to see objects with the help of light energy.
- Plants use light energy to synthesis their food.
- With the help of light energy, our skin is able to synthesis Vitamin-D.
- Electricity can be produced with the help of light energy.

5 Electrical Energy

We know that all things are made up of atoms. Atoms possess particles like protons, electrons and neutrons. Movement of electron in the objects causes an energy. This energy is called electrical energy. In our daily life we use batteries to get electrical energy. Electrical energy is also generated from nuclear power plants, hydroelectric plants and wind mills. It is also generated from solar energy.

Uses of Electrical Energy

- Electrical energy is needed for the working of fan, light, television, washing machine, refrigerator etc.
- Electric iron box, electric stove and electric water heater work by electrical energy.
- It is used to run cars and trains.
- It is used in factories to produce materials.

Do you know?

'Electric eel' is a fish which generates electrical energy. It uses this energy to defend itself against its predators.

Activity 5

Mention the places in Tamil Nadu where electrical energy is generated in power plants.

Nuclear plant	Hydroelectric plant	Thermoelectric plant
