Divide and find the quotient and Remainder.

Example 1

4 9 2 5 ÷ 25

Step: 1

```
      1
25 | 4 9 2 5
   -2 5
   ------
     2 4
```

We know that when divide by 2 digit number have to choose first 2 digit from the dividend

Here divide 49 by 25

$25 \overline{)\ 49}$

25 occurs one time in 49

1 x25 = 25

Step: 2

```
      1
25 | 4 9 2 5
   -2 5 ↓
   ------
     2 4 2
```

Subtract 25 from 49 we get 24,
Next write down 2 from the ten's place

Step: 3

```
      1 9
25 | 4 9 2 5
   -2 5 ↓   |
   ------   |
     2 4 2  |
   -2 2 5 ↓ |
   ------   |
       1 7 5
```

Divide 242 by 25
Calculate the number of 25's in 242
9 X 25 = 225
Subtract 225 from 242 we get 17.
Next bring down 5 from unit place.

Step: 4

```
      1 9 7
25 | 4 9 2 5
   -2 5 ↓   |
   ------   |
     2 4 2  |
   -2 2 5 ↓ |
   ------   |
       1 7 5
     - 1 7 5
     -------
           0
```

Now we have 175
Calculate the number of 25's in 175
7 X 25 = 175

Quotient = 197,
Remainder = 0
