Example 2

A car factory produce 3750 cars per month (30 days).
Find how many cars were produced per day.

Divide 3750 by 30 days.

3750 ÷ 30

Step: 1

$$\begin{array}{r|cccc} & & 1 & & \\ \cline{2-5} 30 & 3 & 7 & 5 & 0 \\ & -3 & 0 & & \\ \cline{2-3} & & 7 & & \end{array}$$

Choose first 2 digit 37 from the dividend
Divide 37 by 30
Calculate the number of 30's in 37
1 X 30 = 30

Step: 2

$$\begin{array}{r|cccc} & & 1 & & \\ \cline{2-5} 30 & 3 & 7 & 5 & 0 \\ & -3 & 0 & \downarrow & \\ \cline{2-5} & & 7 & 5 & \end{array}$$

Subtract 30 from 37, we get 7
Next bring down the 5 in ten's place

Step: 3

$$\begin{array}{r|cccc} & & 1 & 2 & \\ \cline{2-5} 30 & 3 & 7 & 5 & 0 \\ & -3 & 0 & \downarrow & \\ \cline{2-5} & & 7 & 5 & \\ & & -6 & 0 & \\ \cline{2-5} & & 1 & 5 & \end{array}$$

Divide 75 by 30.
Calculate the number of 30's in 75
2 X 30 = 60
Subtract 60 from 75 we get 15

Step: 4

$$\begin{array}{r|cccc} & & 1 & 2 & 5 \\ \cline{2-5} 25 & 3 & 7 & 5 & 0 \\ & -3 & 0 & \downarrow & \\ \cline{2-5} & & 7 & 5 & \\ & & -6 & 0 & \downarrow \\ \cline{2-5} & & 1 & 5 & 0 \\ & & -1 & 5 & 0 \\ \cline{2-5} & & & & 0 \end{array}$$

Next bring down the '0' from unit place.
In 150, calculate how many 30's
5 X 30 = 150

Quotient = 125,
Remainder = 0

The remainder is zero in the above example. The remainder can be a non-zero number also.
