II. Respiratory System

The respiratory system provides oxygen to the tissues of the body and removes carbon dioxide from the tissues. There are three major parts forming the respiratory system.

1. Airway 2. Lungs 3. Muscles of respiration

Do you know?

People suffer due to smoke. Smoke contains large amount of carbon monoxide, a toxic gas. People when engulfed in smoke or fire die due to suffocation.

Activity 1

Sit quietly and count how many times you breathe per minute. On an average, we breathe 16-18 times per minute. Can you guess the number of times you breathe in a day? On an average, we breathe more than 20,000 times in a day.

1 Airway

The airway includes the nasal cavity, pharynx, larynx, trachea, bronchi and bronchioles. It carries air between the lungs and the surrounding.
