1 Central Nervous System

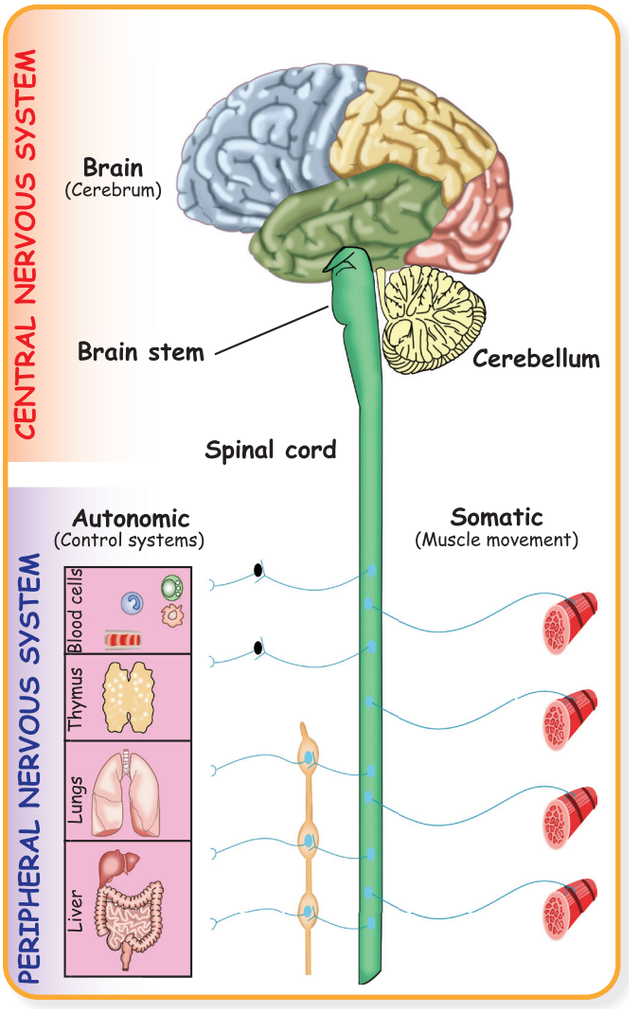

Central nervous system consists of the brain, the spinal cord and the nerves.

❖ Brain

Brain controls all our activities like thinking, reading and writing. The brain is covered by three membranes called meninges. They are dura mater, arachnoid membrane and pia mater. The meninges protect the CNS from mechanical shock. It is made up of eight immovable bones. The brain is made up of millions of functional units called neurons.

Human brain is divided into three major parts.

- Forebrain
- Midbrain
- Hindbrain

Forebrain

- The forebrain consists of cerebrum, thalamus and hypothalamus.
- It is the largest part of the brain.
- It is the centre of human memory.
- It is responsible for intelligence, imagination and reasoning.

Do you know?

The weight of human brain is approximately 1.36 kilogram.

Midbrain

- It lies behind the cerebrum.
- It co-ordinates the movements of the muscles of the body.
- It regulates our vision, hearing, sleep and body temperature.

Hindbrain

- The hindbrain comprises of pons and medulla oblongata.
- It is also called the brain stem.
- It is called 'vital knot' because it controls breathing, heart beat and other involuntary muscles.
- It connects the brain to the spinal cord.
