Heat Zones of the Earth

Why does heat vary from morning to evening?

It is because of the sun's rays.

The land is divided into various heat zones according to the fall of sun's rays on the surface of the Earth.

- The zone between Tropic of Cancer and Tropic of Capricorn is called **Tropical or Torrid zone,** where the sun's rays fall vertically.
- The zone between $23\frac{1}{2}°$N to $66\frac{1}{2}°$N latitude and $23\frac{1}{2}°$S to $66\frac{1}{2}°$S latitude which receives slanting rays of the sun is called **Temperate zone.**
- The zone which recives the extreme slanting rays of the sun and experiences extremely low temperature is called **Frigid zone.**
